casaCare Ice-Free Intensive Concentrate 10 kg | 10 kg

Manufacturer	casaCare
Product number	469
Weight	10kg
Length	280mm
Width	288mm
Height	258mm

Product description

Thawing concentrate down to -45°C

The paw-friendly alternative to road salt

Conventional deicing salts generally lose their effectiveness at -7°C. **casaCare Ice-Free Intensive Concentrate** quickly and safely removes snow and ice down to a temperature of -45°C. Under normal icing conditions without further snowfall, the de-icing effect can last up to 3 days. This makes **casaCare Ice-Free Intensive Concentrate** particularly economical to use. Thanks to its excellent adhesion, removing ice and snow is no problem even on ramps with a slope of up to 45°. Its slightly alkaline formulation counteracts rust formation on metals and ‘acid rain’ in the soil. No adverse effects on concrete were observed when steel reinforcement was properly installed (at least 2 cm deep in the concrete). Because it is completely water-soluble, it does not cause blockages in manhole covers, sewer systems, or wastewater treatment plants.

casaCare Ice-Free Intensive Concentrate is ideal for removing ice and snow from sidewalks and driveways at public facilities such as hospitals, nursing homes, swimming pools, government offices, restaurants, and hotels, as well as from entryways and loading docks in all industrial sectors. It can also be used to dry out damp rooms and RVs, as it removes moisture from the air.

casaCare Ice-Free Intensive Concentrate is not as harsh as road salt or sand, which is particularly beneficial for dogs’ paws. It contains no urea and, according to a study by the University of Bielefeld, is gentler on plant growth than conventional de-icing agents.
